

$$16. y = \frac{4}{5}x - 2$$

$\uparrow$                        $\uparrow$   
 $m = \frac{4}{5}$        $y\text{-int: } (0, -2)$

$$17. y = 2x - 1 \text{ and } 6x - 3y = -3$$

$\uparrow$                        $\uparrow$   
 $m = 2$                        $m = 2$

$$\frac{-3y}{-3} = \frac{-6x - 3}{-3}$$

$$y = 2x + 1$$

$\uparrow$   
 $m = 2$

\* Same slope  
= they are parallel lines

$$18. 19 = 2x + 5$$

$$14 = 2x$$

$$x = \boxed{7 \text{ times}}$$

19. x-intercept: when  $y = 0$

$$7x - 2y = 14$$

$$7x - 2(0) = 14$$

$$7x = 14$$

$$\boxed{x = 2} \rightarrow \boxed{(2, 0)}$$

$$20. \boxed{y = -\frac{1}{2}x + 2}$$
